

There are always those games that seem to make it easier than others, which is great for players if the game is fair. However, there are some games where you know you shouldn't be playing but everyone else seems to be having a blast. And then there are the cheats that people don't want anyone else to know about! Well these hacks and generators could be your chance at getting an edge over other players in these types of games without getting too far into trouble. Cheat Codes for Games There are a few ways you can cheat in a game, whether it's a mobile game or computer game. Some people inject codes into the games files, others go into the source code and do temporary changes to make it easier to advance or access new features. With the right software you get ready-made cheats for your favorite games. Use them during play and get yourself to where you want to be without having to really put in too much work. That's what these generators and hacks are designed to do, get you to where you need to be. And it's done without any risk. Examples of games that have cheat codes: World of Tanks Blitz, Clash of Clans, Clash Royale, League of Legends and many more. Some tips: - Generate a random number (always 1 and the same every time). This will be your new life (maximum 50). Try using this in third person mode while watching other players move their tank. This will make the other player die because his own tank won't attack him (everytime 1 or 2 hit points lost). - Generate a random number (always 1 and the same every time). This will be your new life (maximum 50). Try using this in third person mode while watching other players move their tank. This will make the other player die because his own tank won't attack him (everytime 1 or 2 hit points lost). How to generate a Random Number: - Open a new notepad file and paste this text inside: "#include <int main() { srand((unsigned)time(NULL));/\* first number is not important \*/ printf("%d",rand()/%1000); return 0; }"; Save as "rand.exe" and run it a few times. Check your generated random numbers! - Open a new notepad file and paste this text inside: "#include <int main() { srand((unsigned)time(NULL));/\* first number is not important \*/ printf("%d",rand()/%1000); return 0; }"; Save as "rand.exe" and run it a few times. Check your generated random numbers! How to open a console in World of Warcraft: go to "%WORLD OF WARCRAFT\Interface\AddOns\Blizzard\_NameOfTheMod\main\lua\FrameXML\Default\MainFrame.
